PROJECTS

Employee Research Management System

- It is a platform where the faculty under an authorised ID can provide the progress of their research status. On addition to this final year students are provided a portal where they can choose the faculty as their research guides and can also register under them.
- Created Database Tables and Relations in MYSQL.
- Created Web pages using HTML, CSS, JS and Bootstrap Wrote CRUD Operations and Queried the database using PHP based on User interactions

Agrogenie

- It serves as an all-in-one platform for farmers with many options like weather report, latest tool & technologies available, loan schemes for farmers, information on crops, negotiating the price with buyers for their final yield and many more unique features.
- For efficient growth and development of the agricultural sector, there is a need to familiarize with new technologies like biotechnology, nanotechnology etc. Usage of technology would enhance sustainable livelihood opportunities for the farmers.
- Created Web pages using HTML, CSS, JS and Bootstrap Wrote CRUD Operations and Queried the database using PHP based on User interactions

Vars-Desktop Assistant

- VARS is an intelligent desktop assistant that has been developed to aid users in managing time commitments and performing tasks
- Created UI/UX using tkinter Implementation of text and audio Input for chat interface
